Nucleic acids originating useful as probe or primer neuroblastoma, malignancy for anti-cancer agents in gene expressed in human neuroblastoma, in diagnosing prognosis of human and susceptibility indicator or tumour ma marker

317; 2979pp; Japanese

The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy are susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar to that for markers and markers. N-myc and TrkA genes. and

The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastom, malignancy are susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the CC global changes in gene expression in tissues or cells exposed to the CC toxin and comparing these to gene expression in unexposed tissues or CC cells. Also included are methods of predicting at least one toxic cells. Also included are methods of predicting at least one toxic cells. Also included are methods of predicting at least one toxic cells. Also included are methods of predicting at least one toxic cells. The method compound, comprising detecting the level of CC expression in a tissue or cell sample exposed to the compound of two or CC more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression.

CC The method can also be used to identify an agent which modulates the CC toxic response and predict cellular pathways that a compound modulates to the genes in the torm), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising at least two genes listed in the specification of a set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information conjugated to a the specification of a set of gene expression level in a tissue or cell of at least one gene CC listed in the specification. The method is useful for elucidating global changes in gene expression and for identifying toxicity markers in tissues or cell expression formation may be used as diagnostic markers for the gene expression information may be used as diagnostic markers for the specification or identification of the physiological state of tissue or cell is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed to a compound or agent. Hepatotoxic agent.

                               useful for stimulating and/or expanding T cells specific for a tumour protein for determining the presence of a cancer in a patient. A composition containing the polynucleotide and/or polypeptide is useful for treating a lung cancer in a patient. The polypeptide is useful for removing tumour cells from a biological sample. The polynucleotide is also useful as probe or primer to detect the level of mRNA encoding a tumour protein. This sequence represents a contig of a DNA sequence encoding a lung tumour associated protein, described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC double-stranded DNA (or its complementary strand or the corresp. CC double-stranded DNA) which comprises one of the 7837 "GS" sequences given in AAT19001-T26837 and which is able to hybridise to part of CC given in AAT19001-T26837 and which is able to hybridise to part of CC human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) CC sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the CC 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-CC untranslated sequence is unique to a particular mRNA species, almost CC all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library CC is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. CC The appearance frequency of a given GS in a cDNA library can be Cdetermined (eap. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for crecognising different cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Loc

                                                                                                                                                                                                                   immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX rassociated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers; proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma,

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No flas yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences
                                                                                                                                                     WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells unexposed tissues or cells

Claim 1; Seq ID No 16; 239pp; English.

changes in gene expression and for identifying toxicity markers in tissues or cell exposed to a known toxic. The genes may be used as toxicity markers in drug screening and toxicity assays. The genes and gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent. The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information identifying the expression level in a tissue or cell of at least one gene listed in the specification. The method is useful for elucidating global global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the hepatotoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression the genes is indicative of at least one toxic effect or progression. compounds or the progression of these relates to methods for predicting toxic effects of toxic effects by determining the cell of

                                                                                                                                                                         cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell, to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                            present invention.

                                                                          The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate

(d) assessing the efficacy of a therapy for in a patient;
(e) selecting a composition for inhibiting p
(f) assessing the prostate cell carcinogenia
(g) determining whether prostate cancer has

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antagonists may have neuroprotective; cytostatic; cardioactive; chamunomodulatory; muscular active; eyeneral; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and peptide AAB58549 are used in the course of the invention for the indentification and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

CC AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CC sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; CC immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; CC antidiabetic; hypotensive; dermatological; immunosuppressive; CC antitifilammatory; antibacterial; antiviral; antifungal; antirheumatic; CC antitifilammatory; antibacterial; antiviral; antifungal; antirheumatic; CC antitifilammatory; antibacterial; antiviral; antifungal; antirheumatic; CC anticifilammatory; antibacterial; antiviral; anticifilammatoris, of the therapy CC vectors. The proteins associated with an ORFX-associated disorder. The cleic acids can be used to express ORFX proteins in gene therapy CC vectors. The proteins and nucleic acids may be used to treat cancers, CC proliferative disorders, neurodegenerative disorders, osteoarthritis, CC proteins and nucleic acids may be used to treat cancers, CC graft vs host disease, cardiovascular disease, diabetes mellitus, CC proteins on hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, CC bacterial or fungal infection, malaria, autoimmane disorders, asthma, CC allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, cc coagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                                                                                                                                                                                                                               polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used the none cartilage tendent and/or nerve ties are the concentration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tang

protein genes, and ARE20793 AAE20836 represent the proteins they encode. CC AAE20837.AAE20847 represent human secreted protein fragments. The genes cc and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene cc therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the protein or gene cc mutations in the new genes. Specific uses are described for each of the cc 18 genes, based on the tissues in which they are most highly expressed, cc and include developing products for the diagnosis or treatment of cc immune or autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cc cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and Gaucher's disease), neurological cdiseases (e.g. Alzheimer's disease, Parkinson's disease neof Cardiac arrest, tachycardia, angina and thrombosis), infections caused by truese and disease and functional collar disorders (e.g. AAD33237-AAD33280 represent cDNAs corresponding to protein genes, and AAE20793-AAE20836 represent the infections). Secreted proteins and fungi and ocular disorders 0f the invention 18 human secreted neurological ť

They can also be used as an additive to increase or decrease storage capabilities and nutritional content of food. The present sequence represents human secreted protein fragment referred to in the disclosure of the invention.

cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and Gaucher's disease), neurologic diseases (e.g. Alzheimer's disease, Parkinson's disease and Charcot-Warie-Tooth disease), cardiovascular or cerebrovascular disorders (e.g. cardiac arrest, tachycardia, angina and thrombosis), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Secreted proteins of the invention can also be used to promote wound healing, maintain organs before transplantation, support cell culture of primary tissues, modulate differentiate in embryos, modulate mammalian characteristics (e.g. height and weight), modulate the catabolism, anabolism, energy storage, mental state, borbythms, cardiac right man anabolism, anabolism, energy storage, mental state, bacetites operation can be considered to contain the catabolism, anabolism, energy storage, mental state, bacetites of cardiac rights and weight).
                                                                                                                                        the catabolism, anabolism, energy storage, mental state, biorhythms, cardiac rhythms, reproductive potential, hormonal levels appetite, memory and stress. They can also be used as an additive to increase or decrease storage capabilities and nutritional content of food. The present sequence represents human secreted protein fragment referred
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mutations in the new genes. Specific uses are described for each of the 18 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of immune or autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), of process and bupper relations of the process o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the presence of the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample or by determining the new protein in a sample o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                process genes, and AAE20/93-AAE20836 represent the proteins they em AAE20837-AAE20847 represent human secreted protein fragments. The go and their corresponding secreted secreted protein for preventing the secretary and their corresponding modified proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAD33237-AAD33280 represent cDNAs corresponding to protein genes, and AAE20793-AAE20836 represent the

therapeutic protein X and human albumin (HA, also known as human albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albuextends the shelf-life of protein X, and may increase its biologic in vitro/in vivo activity. The protein is useful for treating and

                                                                               В
                                                                                                                                                                                                                                                                                                                                                            CC AAD33237-AAD33280 represent cDNAs corresponding to 18 human secreted protein genes, and AAE20793-AAE20836 represent the proteins they encode. CC AAE20837-AAE20847 represent human secreted protein fragments. The genes cC and their corresponding secreted proteins are useful for preventing, ctreating or ameliorating medical conditions, e.g., by protein or gene ctherapy. Pathological conditions can be diagnosed by determining the presence of mutations in the new penes. Specific uses are described for each of the cC amount of the new genes. Specific uses are described for each of the CC and include developing products for the diagnosis or treatment of the mutations in the tissues in which they are most highly expressed, cC and include developing products for the diagnosis or treatment of the munne of iseases (e.g. HIY (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), ccancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and Gaucher's disease), neurological classes (e.g. Alzheimer's disease, Parkinson's disease and Charcot-Marie-Tooth disease), cardiovascular or cerebrovascular disorders (e.g. cardiac arrest, tachycardia, angina and thrombosis), infections caused by breathing and context of cardiac arrest, tachycardia, angina and thrombosis), infections caused by breathing and functions caused by breathing and context of cardiac arrest, tachycardia, angina and charcot-
                                                                                                                                       Matches
                                                                                                                                                               Query Match
                                                                                                                                                                                                                             by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Secreted proteins of the invention can also be used to promote wound healing, maintain organs before transplantation, support cell culture of primary tissues, modulate differentiation of embryonic stem cells, induce mesodermal tissue to differentiate in embryos, modulate mammalian characteristics (e.g. height and weight), modulate the catabolism, anabolism, energy storage, mental state, biorhythms, cardiac rhythms, reproductive potential, hormonal levels appetite, memory and stress. They can also be used as an additive to increase or decrease storage capabilities and nutritional content of food. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating e.g. Alzheimer's discardio-/cerebrovascular disorders and multiple sclerosis -

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventius useful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; SEQ ID NO 42540; 21pp + Sequence Listing; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Š
                                                       The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABP4131-ABP56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome) inflammatory conditions (e.g., sections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome) inflammatory conditions (e.g., sections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome) inflammatory conditions (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome).
                                        shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases -

The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaemia), cardiovascular disorders, respiratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                    CC capable of activating transcription of a variety of genes upon activation co f p62 and is capable of binding to the p62/p561pk complex to modulate Lck function in a manner similar to p62. The genes transcribed in CC response to p160 activation likely include those of which are involved in CC response to p160 activation likely include those of which are involved in CC response to p160 activation likely include those of which are involved in CC response to p160 polypeptide is also a substrate for CC antibodies. This p160 polypeptide is also a substrate for CC serine/threonine kinase activity. p160 polypeptides can modulate CC degradation of cellular proteins e.g. cell cycle regulatory proteins CC stimulating expression of cell cycle dependent kinase inhibitors and CC arresting cell proliferation. As p160 boosts B cell response it may be used to treat disorders where this is beneficial, e.g. infections by pathogenic microorganisms. p160 can be used to expand T cell populations CC contonmune diseases, e.g. diabetes mellitus, arthritis, multiple

modulation; cellular response; o
p56-lck.
This sequence represents a novel p160 polypeptide (160.1) which is capable of activating transcription of a variety of genes upon action of p62 and is capable of binding to the p62/p561pk complex to modul tok function in a manner similar to p62. The genes transcribed in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc response to p160 activation likely include those of which are involved in cc T or B cell development/differentiation, T or B cell activation or cc production of T or B cell specific factors e.g. lymphokines or cc antibodies. This p160 polypeptide is also a substrate for cc antibodies. This p160 polypeptide is also a substrate for cc degradation of cellular proteins e.g. cell cycle regulatory proteins cc stimulating expression of cell cycle dependent kinase inhibitors and cc arresting cell cycle progression at specific boundaries to thereby modulate cell cycle progression at specific boundaries to thereby cc modulate cell cycle progression at specific boundaries to thereby cc used to treat disorders where this is beneficial, e.g. infections by pathogenic microorganisms. p160 can be used to expand T cell populations cf or treating infectious diseases or cancer and p160 inhibitors could creduce B or T cell responses and may be used to treat a variety of cutoimmune diseases, e.g. diabetes mellitus, arthritis, multiple cycle contents and crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
